Monitor.

 Clarix Reflex[®]

- Patient Rehabilitation System -

The Patient Journey

Clarix Reflex guides patients through their episode of care from 2 weeks prior to surgery to the end of their home-based recovery

*Clarix Reflex Case Study at RebalanceMD on file at www.clarixreflex.com

Track

Continuously measures your patient's activity and knee ROM 24/7 throughout the entire patient episode

24/7 Continuous Tracking

- Range of motion
- Walking, Standing, Sitting, Lying
- Icing temperature

Worry-Free Operation

- Sensor automatically powers on and connects
- Battery lasts for 8 weeks (no charging or replacement needed)
- Offline data storage for up to 5 days

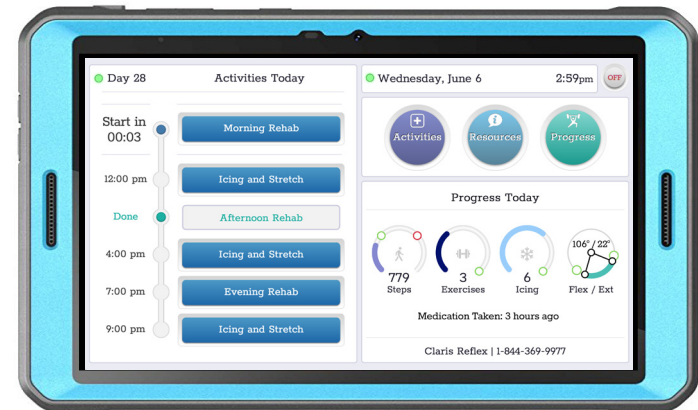

Coach

Automatically guides your patients through their entire recovery

Self Guided Patient Recovery

Patients are automatically prompted through your clinical protocols, increasing:

- Icing compliance
- Exercise compliance
- Pain medication tracking
- Survey compliance (e.g. KOOS)

Fully Configurable

Customize using your own pre/post surgical care protocols or choose from one of our templates - clinicians have complete control over each patient.

Monitor

Reduces risk by monitoring patient recovery at home

Online Clinician Dashboard

- Real-time progress indicators
- Powerful alerts
- Secure messaging
- Custom reports
- Flexible configuration

Better Data. Better Care. Lower Costs.

Clarix Reflex provides you with the patient recovery data needed to inform better clinical decisions.

Better Patients Lower Costs

Improves compliance for better patient outcomes at lower cost

Clinical Study Results

12

Faster Recovery

Reflex patients were discharged from post-acute care 16 days earlier

30%

Fewer PT Visits

Reflex patients required 4 fewer physical therapy (PT) visits

100%

Improved Compliance

Reflex patients report improved compliance with their prescribed recovery program

89%

Highly Recommended

of Reflex patients would *highly* recommend it to others (Net Promoter Score)
